LAB REPORT on

Big Data Analytics (23CS6PCBDA)

Submitted by

Manvendra Singh Chouhan(1BM22CS148)

in partial fulfillment for the award of the degree of BACHELOR OF ENGINEERING
in
COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING
(Autonomous Institution under VTU)
BENGALURU-560019
Feb-2025 to June-2025

B. M. S. College of Engineering, Bull Temple Road, Bangalore 560019

(Affiliated To Visvesvaraya Technological University, Belgaum) **Department of Computer Science and Engineering**

CERTIFICATE

This is to certify that the Lab work entitled "Big Data Analytics (23CS6PCBDA)" carried out by Manvendra Singh Chouhan (1BM22CS148), who is bonafide student of B. M. S. College of Engineering. It is in partial fulfilment for the award of Bachelor of Engineering in Computer Science and Engineering of the Visvesvaraya Technological University, Belgaum during the year 2025. The Lab report has been approved as it satisfies the academic requirements in respect of a Big Data Analytics - (23CS6PCBDA) work prescribed for the said degree.

Amruta Assistant Professor Department of CSE BMSCE, Bengaluru Dr. Kavitha Sooda Professor and Head Department of CSE BMSCE, Bengaluru

Index Sheet

SI. No.	Experiment Title	Page No.
1	MongoDB- CRUD Demonstration.	1-4
2	Perform the following DB operations using Cassandra. a) Create a keyspace by name Employee b) Create a column family by name Employee-Info with attributes Emp_Id Primary Key, Emp_Name, Designation, Date_of_Joining, Salary,Dept_Name c) Insert the values into the table in batch d) Update Employee name and Department of Emp-Id 121 e) Sort the details of Employee records based on salary f) Alter the schema of the table Employee_Info to add a column Projects which stores a set of Projects done by the corresponding Employee. g) Update the altered table to add project names. h) Create a TTL of 15 seconds to display the values of Employees.	5-6
3	Perform the following DB operations using Cassandra. a) Create a keyspace by name Library b) Create a column family by name Library-Info with attributes Stud_Id Primary Key, Counter_value of type Counter, Stud_Name, Book-Name, Book-Id, Date_of_issue c) Insert the values into the table in batch d) Display the details of the table created and increase the value of the counter e) Write a query to show that a student with id 112 has taken a book "BDA" 2 times. f) Export the created column to a csv file g) Import a given csv dataset from local file system into Cassandra column family	7-8
4	Execution of HDFS Commands for interaction with Hadoop Environment. (Minimum 10 commands to be executed)	9-10
5	Implement Wordcount program on Hadoop framework	11-14
6	From the following link extract the weather data https://github.com/tomwhite/hadoop book/tree/master/input/ncdc/all Create a Map Reduce program to a) find average temperature for each year from NCDC data set. b) find the mean max temperature for every month.	15-23
7	For a given Text file, Create a Map Reduce program to sort the content in an alphabetic order listing only top 10 maximum occurrences of words.	24-30
8	Write a Scala program to print numbers from 1 to 100 using for loop.	31
9	Using RDD and FlatMap count how many times each word appears in a file and write out a list of words whose count is strictly greater than 4 using Spark.	32-33

10	Write a simple streaming program in Spark to receive text data	
10		
	streams on a particular port, perform basic text cleaning (like	34-35
	white space removal, stop words removal, lemmatization, etc.),	34-33
	and print the cleaned text on the screen. (Open Ended Question).	

Course Outcome

CO1	Apply the concept of NoSQL, Hadoop or Spark for a given task	
CO ₂	Analyze big data analytics mechanisms that can be applied to obtain	
	solution for a given problem.	
CO ₃	Design and implement solutions using data analytics mechanisms for a	
	given problem.	

Experiment-1

Q) MongoDB- CRUD Operations Demonstration (Practice and Self Study)

Code & Output:

1. Create a database "Student" with the following attributes Rollno, Name, Age, ContactNo, Email-Id, grade, hobby:

use Students;

2. Insert 5 appropriate values according to the below queries.

{ "Rollno": 14, "Name": "Charlie", "Age": 24, "ContactNo": "4567890123", "Email-Id": "charlie@example.com", "hobby": "Gardening" }])

```
Atlas atlas-wanmtx-shard-0 [primary] Student> use Students
switched to db Students
Atlas atlas-wanmtx-shard-0 [primary] Students> show collections
Atlas atlas-wanmtx-shard-0 [primary] Students> db.students.insertMany([
"B", "hobby": "Painting" },
[ "Rollno": 12, "Name": "Bob", "Age": 22, "ContactNo": "2345678901", "Email-Id": "bob@example.com", "grade": "C", "hobby": "Cooking" }, ... [ "Rollno": 13, "Name": "Eve", "Age": 23, "ContactNo": "3456789012", "Email-Id": "eve@example.com", "grade": "A"
},
        { "Rollno": 14, "Name": "Charlie", "Age": 24, "ContactNo": "4567890123", "Email-Id
": "charlie@example.com", "hobby": "Gardening" }
... ])
  acknowledged: true,
  insertedIds: {
    '0': ObjectId("661ce9dc76a00ff8cc51dae1"),
    '1': ObjectId("661ce9dc76a00ff8cc51dae2"),
    '2': ObjectId("661ce9dc76a00ff8cc51dae3"),
    131: ObjectId("661ce9dc76a00ff8cc51dae4"),
    '4': ObjectId("661ce9dc76a00ff8cc51dae5")
```

3. Write query to update Email-Id of a student with rollno 10.

4. Replace the student name from "Alice" to "Alicee" of rollno 11

5. Display Student Name and grade(Add if grade is not present)where the _id column is 1. db.students.find({}, { "Name": 1, "grade": { \$ifNull: ["\$grade", "Not available"] }, "_id": 0 })

6. Update to add hobbies

7. Find documents where hobbies is set neither to Chess nor to Skating db.students.find({ "hobby": { \$nin: ["Chess", "Skating"] } })

```
Atlas atlas-wanmtx-shard-0 [primary] Students> db.students.find({ "hobby": { $nin: ["Chess
", "Skating"] } })
    _id: ObjectId("661ce9dc76a00ff8cc51dae1"),
    Rollno: 10,
    Name: 'John',
    Age: 20,
    ContactNo: '1234567890',
    'Email-Id': 'john.doe@example.com',
    grade: 'A',
hobby: 'Reading'
    _id: ObjectId("661ce9dc76a00ff8cc51dae2"),
    Rollno: 11,
Name: 'Alicee',
Age: 21,
    ContactNo: '9876543210',
    'Email-Id': 'alice@example.com',
    grade: 'B',
    hobby: 'Painting'
  },
    _id: ObjectId("661ce9dc76a00ff8cc51dae3"),
    Rollno: 12,
    Name: 'Bob',
    Age: 22,
    ContactNo: '2345678901',
'Email-Id': 'bob@example.com',
    grade: 'C',
hobby: 'Cooking'
```

8. Find documents whose name begins with A db.students.find({ "Name": /^A/ })

Experiment – 2

- Q) Perform the following DB operations using Cassandra
 - a) Create a keyspace by name Employee
 - b) Create a column family by name Employee-Info with attributes Emp_Id Primary Key, Emp_Name,
 Designation, Date_of_Joining, Salary, Dept_Name
 - c) Insert the values into the table in batch
 - d) Update Employee name and Department of Emp-Id 121
 - e) Sort the details of Employee records based on salary
 - f) Alter the schema of the table Employee_Info to add a column Projects which stores a set of Projects done by the corresponding Employee.
 - g) Update the altered table to add project names
 - h) Create a TTL of 15 seconds to display the values of Employees

Code & Output:

```
cqlsh:employee> update employee_info using ttl 15 set salary = 0 where emp_id = 121;
cqlsh:employee> select * from employee_info;

emp_id | bonus | date_of_joining | dep_name | designation | emp_name | projects | salary

Experiment -3

- Q) Perform the following DB operations using Cassandra
 - a) Create a keyspace by name Library
 - b) Create a column family by name Library-Info with attributes Stud_Id Primary Key,
 Counter_value of type Counter,
 Stud_Name, Book-Name, Book-Id,
 Date_of_issue
 - c) Insert the values into the table in batch
 - d) Display the details of the table created and increase the value of the counter
 - e) Write a query to show that a student with id 112 has taken a book "BDA" 2 times
 - f) Export the created column to a CSV file
 - g) Import a given CSV dataset from local file system into Cassandra column family

Code & Output:

Experiment - 5

Q) Implement Wordcount program on Hadoop framework

```
Code:
```

```
Mapper Code: WCMapper.java
import java.io.IOException;
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.LongWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapred.MapReduceBase;
import org.apache.hadoop.mapred.Mapper;
import org.apache.hadoop.mapred.OutputCollector;
import org.apache.hadoop.mapred.Reporter;
public class WCMapper extends MapReduceBase implements Mapper<LongWritable, Text,
Text, IntWritable> {
  public void map(LongWritable key, Text value, OutputCollector<Text, IntWritable>
output, Reporter rep) throws IOException {
    String line = value.toString();
    for (String word : line.split(" ")) {
      if (word.length() > 0) {
         output.collect(new Text(word), new IntWritable(1));
       }
```

Reducer Code: WCReducer.java

import java.io.IOException;

```
import java.util.Iterator;
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapred.MapReduceBase;
import org.apache.hadoop.mapred.OutputCollector;
import org.apache.hadoop.mapred.Reducer;
import org.apache.hadoop.mapred.Reporter;
public class WCReducer extends MapReduceBase implements Reducer<Text, IntWritable,
Text, IntWritable> {
  public void reduce(Text key, Iterator<IntWritable> value, OutputCollector<Text,
IntWritable> output, Reporter rep) throws IOException {
    int count = 0;
    while (value.hasNext()) {
       IntWritable i = value.next();
       count += i.get();
     }
    output.collect(key, new IntWritable(count));
  }
}
Driver Code: WCDriver.java
import java.io.IOException;
import org.apache.hadoop.conf.Configured;
import org.apache.hadoop.fs.Path;
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapred.FileInputFormat;
```

```
import org.apache.hadoop.mapred.FileOutputFormat;
import org.apache.hadoop.mapred.JobClient;
import org.apache.hadoop.mapred.JobConf;
import org.apache.hadoop.util.Tool;
import org.apache.hadoop.util.ToolRunner;

  public int run(String args[]) throws IOException {
    if (args.length < 2) {
       System.out.println("Please give valid inputs");
       return -1;
     }
    JobConf conf = new JobConf(WCDriver.class);
    FileInputFormat.setInputPaths(conf, new Path(args[0]));
    FileOutputFormat.setOutputPath(conf, new Path(args[1]));
    conf.setMapperClass(WCMapper.class);
    conf.setReducerClass(WCReducer.class);
    conf.setMapOutputKeyClass(Text.class);
    conf.setMapOutputValueClass(IntWritable.class);
    conf.setOutputKeyClass(Text.class);
    conf.setOutputValueClass(IntWritable.class);
    JobClient.runJob(conf);
    return 0;
  }
```

```
public static void main(String args[]) throws Exception {
   int exitCode = ToolRunner.run(new WCDriver(), args);
   System.out.println(exitCode);
}
```

Output:

Experiment – 6

Q) From the following link extract the weather data https://github.com/tomwhite/hadoopbook/tree/master/input/ncdc/all

Create a Map Reduce program to

- a) find average temperature for each year from NCDC data set.
- b) find the mean max temperature for every month.

Code:

a) Find average temperature for each year from NCDC data set

AverageDriver.java

```
package temp;
import org.apache.hadoop.fs.Path;
import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.Text;
import org.apache.hadoop.mapreduce.Job;
import org.apache.hadoop.mapreduce.lib.input.FileInputFormat;
import org.apache.hadoop.mapreduce.lib.output.FileOutputFormat;
public class AverageDriver {
  public static void main(String[] args) throws Exception {
    if (args.length != 2) {
       System.err.println("Please Enter the input and output parameters");
       System.exit(-1);
     }
    Job job = new Job();
    job.setJarByClass(AverageDriver.class);
    job.setJobName("Max temperature");

Experiment-8

Q) Write a Scala program to print numbers from 1 to 100 using for loop.

Code:

```
object ExampleForLoop1 {
    def main(args: Array[String]): Unit = {
        for (counter <- 1 to 100)
        print(counter + " ")
        // to print new line
        println()
    }
}</pre>
```

Output:

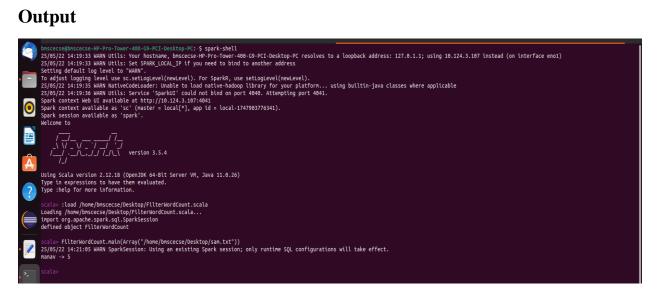

Experiment-9

Q) Using RDD and FlatMap count how many times each word appears in a file and write out a list of words whose count is strictly greater than 4 using Spark

Code:

```
import org.apache.spark.sql.SparkSession
object FilterWordCount {
 def main(args: Array[String]): Unit = {
  if (args.length < 1) {
   System.err.println("Usage: FilterWordCount <file>")
   System.exit(1)
  }
  val spark = SparkSession.builder()
   .appName("FilterWordCount")
   .master("local[*]") // Use local[*] for running on local machine with multiple cores
   .getOrCreate()
  val rdd = spark.sparkContext.textFile(args(0))
  val counts = rdd
   .flatMap(\_.split("\s+"))
   .map(_.replaceAll("""[\p{Punct}]""", ""))
   .filter(_.nonEmpty)
   .map(w => (w.toLowerCase, 1))
   .reduceByKey(_ + _)
   .filter(\_.2 > 4)
  counts.collect().foreach{ case (w, c) => println(s"$w -> $c") }
  spark.stop()
```

Output

Experiment-10

Q) Write a simple streaming program in Spark to receive text data streams on a particular port, perform basic text cleaning (like white space removal, stop words removal, lemmatization, etc.), and print the cleaned text on the screen. (Open Ended Question).

Code:

```
import org.apache.spark.streaming.{Seconds, StreamingContext}
import org.apache.spark.ml.feature.{RegexTokenizer, StopWordsRemover}
import org.apache.spark.sql.functions._
object TextStreamCleaner {
 def main(args: Array[String]): Unit = {
  val ssc = new StreamingContext(sc, Seconds(5))
  val sparkSession = spark
  import sparkSession.implicits._
  val lines = ssc.socketTextStream("localhost", 9999)\
  lines.foreachRDD { rdd =>
   if (!rdd.isEmpty()) {
    val df = rdd.toDF("text")
    val tokenizer = new RegexTokenizer()
      .setInputCol("text")
      .setOutputCol("words")
      .setPattern("\\W")
     val tokenizedDF = tokenizer.transform(df)
     val remover = new StopWordsRemover()
      .setInputCol("words")
      .setOutputCol("filtered")
     val cleanedDF = remover.transform(tokenizedDF)
    cleanedDF.select("filtered").show(false)
```

```
}
ssc.start()
ssc.awaitTermination()
}
```

Output
